# ★ TARGET, ENGAGE & PERSUADE ★ VOTERS ACROSS ALL CHANNELS

**2024 is poised to be another unprecedented and unpredictable election cycle.** There hasn't been a landslide election for the US president since Ronald Reagan won in 1984. In fact, in 2020, the margin was much smaller. President Biden got 51.3% of the votes compared to former President Trump's 46.8%. Third-party candidates picked up just 1.8%. With margins that slim, a few votes make a BIG difference. Now, with only Nikki Haley remaining up against Trump as we head into the primaries, the possibility of a Trump v. Biden rematch seems increasingly likely. Access to real-time, relevant data (and a lot of it) to determine which way voters are leaning and how they can be persuaded will be the key to success — and campaigns won't find it in traditional voter files.

At Resonate, we've identified **10 unique voter segments that campaigns and candidates will need heading into the 2024 primary election cycle.** To build this unique voter landscape, Resonate leverages its unparalleled AI-data engine, rAI, which combines data from the nation's largest continuous voter survey, including questions related to today's most relevant political and policy issues, with behavioral data at scale. Machine-learning algorithms enable Resonate to yield thousands of individual-level insights on every eligible voter, from their party, policy positions, preferred voting method, psychological drivers, personal values and more. Lastly, Resonate uses AI **to cluster and segment the eligible electorate based on the most fundamental and relevant attributes to predict 2024 voting behavior.**

Resonate is a pioneer in AI-powered voter data, delivering best-in-class targeting and deep, real-time audience analysis. Our first-party research, segmentation builder, and managed programmatic media services have been the driving force behind thousands of political campaign wins, from local to federal levels. Organizations and their agencies work with us to identify and better understand critical voter and stakeholder audiences, implement quick, cross-screen digital targeting, and improve ad message relevancy across their intended targets—all leading to superior campaign success. The key voter segments outlined in this report are available for immediate activation across all programmatic digital channels, including CTV.

# INTRODUCING THE RESONATE 2024 ★ PRIMARY ELECTION VOTER LANDSCAPE ★

Here at Resonate, our primary objective is to leverage deep voter intelligence and the latest technology to help you win elections. The result is an eligible U.S. electorate cleanly defined across 10 distinct segments based on a unique set of insights that will influence candidate choice in the 2024 primaries. These voter audiences are available for immediate targeting and activation across digital channels through our managed campaign solutions.

Other Voter Landscapes	Resonate's Voter Landscape
Static based on data collected at a point in time	Dynamic, refreshed nightly to reflect the 24 hour news cycle's impact on voter behavior and intent
Unable to predict future changes in political sentiment or bubbling issues.	Always fresh, continuously capturing voters and their evolving sentiment in real-time
Limited in scope with studies that focus on specific aspects such as demos or voting behavior	Based on thousands of data points on each audience, providing everything you need to understand them in vivid detail. Voters are complex, you need a scope of essential factors to really understand them
Focused on correlation, not causation and they don't get to the "why", the motivations behind these correlations	Include rich audience information on personal values and motivations, empowering you to identify who can be motivated to turn out and with what message
Not immediately actionable and exist independently of the digital eco-system, with no way to directly activate without recreating audiences using a variety of 3rd party data sources	Built for the digital ecosystem with direct integration for targeting across all digital screens and channels, including CTV
